

IP23 PROTECTION METAL BOX

MBT Series

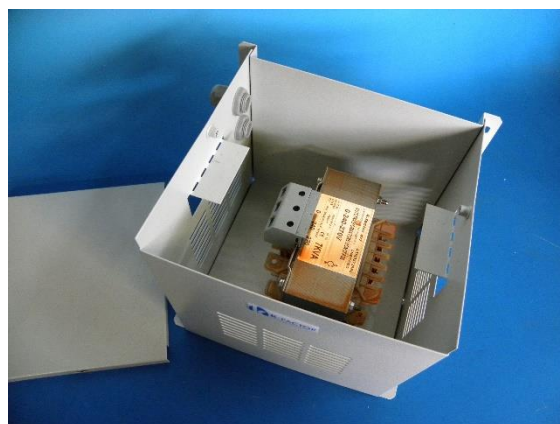

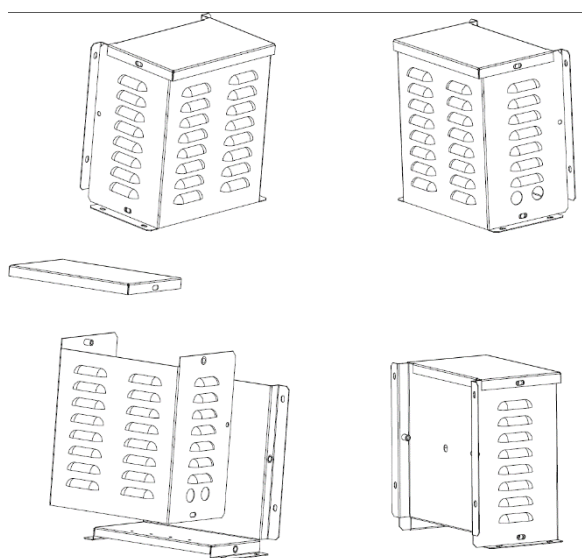

The enclosures of the MBT series are made of epoxy-painted 15/10 steel with a special peeled treatment that makes the paint more resistant to scratches and dents.

The cooling slots placed on the front and sides allow an adequate dissipation of the overtemperatures generated by the electrical components installed inside.

Using the slots on the back or bottom you can install the product both on the floor and on the wall. In any case, you can remove both the lid and the side flange without removing the box fastening.

The bottom of the box is raised by ca. 1.5 cm to allow the fixing of elements on the bottom itself using bolts screwed from the bottom while keeping the support of the side flange unchanged. The same is done for the vertical background panel.

The lid on demand is dismantled to avoid stagnation of liquids.

Protection: IP23

Cable input on one side

Suitable for floor or wall mounting

Code	dimensions mm.	Internal available size	Weight Kg.
MBT01	280x220x220	260x210x200	3
MBT02	330x240x280	310x230x260	4
